Date	27 october 2022
Team ID	PNT2022TMID37138
Project Name	Smart waste management system in metropolitian cities
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- The senor is place so that it gives alert when garbage is full and uniqueness about this solution is we have a closing lid to avoid over full of trash, solution gives uniqness to the existing system .

- This architecture contains a sensor inside the garbage bin where it measures the weight of the garbage and gives alert.

- This requires ultrasonic sensor which measures the weight.
